Supercharge your Agile with Behaviour Driven Development (BDD)

Transform your software development cycle in three steps.

You've learned the basic moves of Agile, but you've yet to experience the delight of true business agility.

Predictability: Things always seem to take longer than you thought. Deadlines are missed. Estimating feels like a meaningless task.

Communication: Developers and testers make different interpretations of the requirements and start working at cross-purposes. You only realise what you really wanted to build when you start to test it.

Quality: Defects seem to leak out of the product. Testing is a major overhead, and it's getting worse all the time. Velocity slows as the code gets harder and harder to change.

Sound familiar? Unfortunately, these experiences are too common in supposedly "Agile" teams. Agile isn't something that can be bought off the shelf. It's much more than a set of tools and rituals.

To become truly Agile your teams need the right cultural approach.

BDD - Three Steps To Supercharging Your Agile

BDD builds shared understanding across your organisation in three steps...

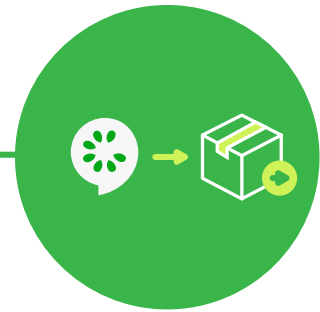

Discover

We use collaborative, structured conversation to develop an unambiguous user-story. Comprehensive acceptance criteria and concrete examples define how it will behave.

Formulate

We document our examples as scenarios and express them in business language so that everyone can read, understand and provide feedback.

Automate

We turn our business-readable scenarios into living documentation by connecting them to the codebase. Cucumber continuously tests our scenarios so we can ship with complete confidence.

How can I implement BDD in my organization?

With Cucumber! Our two flagship training courses, BDD Fundamentals and BDD With Cucumber, teach you the basic principles of BDD and how to integrate them into your development cycles. We also supplement our trainings with on-the-job coaching to guarantee success!

Here's what our customers say:

Through a two year engagement with Cucumber the level of technical excellence in our teams has improved and we have a healthy attitude towards collaboration across all 500+ employees.

David Anderson, Director of Technology, Liberty IT.

My main objective was to find ways to refine and understand our stories. BDD is a great, structured way to do this. We will

now use these techniques upfront to avoid costly mistakes down the line.

Jennifer Lylak, Senior Business Analyst, Microlise.

I would absolutely recommend this course - the concepts of BDD were well explained with solid, easy to understand examples.

Jeremy Gallagher, QA Manager, Blue State Digital.
